

17

4. The system of claim 1, wherein the mobile device is enabled with a camera, and wherein a gesture in the air comprising of a simple rotation of a hand advances the next window on the mobile device.

5. The system of claim 1, wherein a three finger pushed across in the screen in a left direction creates three windows for a plurality of applications.

6. The system of claim 1, wherein a gesture is linked to a macro in which a plurality of events are linked to the gesture across a plurality of applications including one or more of a documents, email, news, phone call.

7. The system of claim 1, wherein a server maintains a plurality of electronic signatures and authentication files for a user as part of a signature event, and wherein a authentication includes recording a witness using a camera on the mobile device.

8. An input and authentication system for a multifunction mobile device, comprising:

the multifunction mobile device having a processor, memory, wireless transmit and receive functions, and voice and audio functions,

wherein the authentication system is configured to:

provide an authentication request on the display of the mobile device;

present a password on the display of the mobile device;

accept the password using an on-screen keyboard;

require a match of the password to a pre-existing password entry;

wherein the mobile device is configured with a first authentication requirement for access to the mobile device and a second authentication requirement for authentication to one or more applications on the mobile device,

wherein authentication to the system requires a response to a series of authentication steps,

wherein at least one authentication to the mobile device or the application is enabled using a gesture,

wherein said gesture is a visual movement in the form of a pre-defined shape by a user, and

18

wherein at least one key is expanded based on ambient light detected by a light sensor on the device to facilitate easier viewing of the at least one key, and at least one or more of or combinations thereof:

a) wherein the at least one key is expanded in response to the at least one key being depressed;

b) wherein a second key is expanded as a suggested next character in response to a first key depressed; and

c) wherein expansion of the at least one key is based on one or more of intensity of light, moisture, or humidity or combinations thereof.

9. The system of claim 8, wherein the required authentication request is specified by a server.

10. The system of claim 8, wherein the gesture is saved in the memory of the mobile device or a server or combinations thereof.

11. The system of claim 8, wherein a window is assignable to a position in a roundtable-like format.

12. The system of claim 8, wherein the gesture comprises a rotation of a hand which correlates to advancing to a window.

13. The system of claim 8, wherein the mobile device is configured to receive a trace of an object outline by a user.

14. The system of claim 8, wherein the mobile device is enabled to receive notifications from a server.

15. The system of claim 8, wherein the mobile device is configured to show a desktop in response to a user tapping a predefined area of the mobile device.

16. The system of claim 8, wherein the mobile device is configured to require a plurality of authentication items including one or more of a signature, password, voice, or GPS.

17. The system of claim 8, wherein the key is expanded in response to the moisture or humidity detected.

18. The system of claim 8, wherein a set of contacts are disabled or limited in access based on a classification of the contact as a work or personal contact.

19. The system of claim 8, wherein the mobile device presents a shape drawing window.
